EDUCATION

June 2018

Bachelor of Computer Applications:
Computer Applications
Development

**Indira Gandhi National Open
University**, Delhi

While I began my academic journey with passion and dedication, personal and financial circumstances led me to make the practical decision to leave college. However, I redirected that adversity into motivation—pursuing certifications, real-world projects, and continuous self-learning in cybersecurity.

March 2015

High School Diploma: Arts

**SERLY Mixed Higher Secondary
School | ICSE**, Kharagpur, India

ABOUT ME

I'm a Certified Ethical Hacker and Security Researcher with a deep passion for offensive security and securing digital ecosystems. My journey from technical support to advanced cybersecurity research reflects not only adaptability but a relentless commitment to growth. - I specialize in manual source code review and vulnerability research, with experience identifying CVEs and correlating findings across libraries for clients such as CheckMarx. My skills span web application penetration testing, vulnerability assessment, and contributions to bug bounty platforms. - I have appeared for interviews at major tech firms like Google, Apple, and MicroStrategy, which have helped sharpen my skills and prepare me for advanced roles in cybersecurity. - I thrive in hands-on, high-impact environments and bring a curious, self-driven mindset to every challenge. While I don't hold a formal degree, my career is proof that skill, consistency, and passion can break conventional boundaries in cybersecurity.

EXPERIENCE

July 2023 - Current

Security Researcher, *Bug Bounty Hunter* / VDP, Remote

- Secured 4 organizations by identifying and reporting critical vulnerabilities, including 7 SQL Injections, 1 Remote Code Execution, and 2 Information Disclosure instances, acknowledged by the Indian Government.
- Partnered with Hostinger to disrupt a credit card scam operation, protecting over 50 victims and preventing significant financial loss.
- Conducted vulnerability assessments and penetration testing for Android applications, leveraging expertise in SAST and DAST techniques.

February 2024 - June 2025

Software Engineer - Security Research, *LoginSoft Pvt Ltd*, Hyderabad

- Conduct vulnerability research on a wide range of open-source projects.
- Utilize proprietary software to analyse and correlate data, aiding clients in identifying vulnerable software or dependencies.
- Mark and track software versions that may be vulnerable.
- Cover major ecosystems including PHP, Ruby, Go, Python, Java,

CERTIFICATIONS

December 2024

Certified Ethical Hacker (CEH v12)

November 2023

CISCO Junior Cyber Security Analyst

July 2023

Oracle Cloud Data Management
2023 Certified Foundations
Associate

January 2022

Oracle Cloud Infrastructure
Foundations 2021 Associate

July 2022

CISCO Python Essentials

TryHackMe CTF Top 1%

JavaScript, .NET Framework, C, and C++.

- Perform daily tasks such as correlating data related to CVE and non-CVE vulnerabilities through static analysis and code reviews.
- Top 3 Performer in the project, streamlined operations with automation for faster output

November 2019 - December 2021

Senior Associate, *Wipro Digital Operations & Platform*,
Kolkata, IN

- Provided expert technical support for electronic devices, achieving a 95% issue resolution rate while consistently meeting KPIs.
- Diagnosed and resolved complex technical issues for U.S. clients, reducing security incidents by 30% and safeguarding data.
- Mentored a team of 18 members, bridging skill gaps, introducing new techniques, and driving performance improvements.
- Top 3 Performer within the project.

SKILLS & TOOLS

Critical thinking

MS office

Teamwork and collaboration

Proficient in MobSF analysis

Secure Code Analysis (Java,
Javascript, C, C++, PHP, GO,
Python, DOT-NET)

Windows Forensics

CVSS

Data analysis

Rapid prototyping

Penetration Testing

VAPT / Web Application Security
Testing

Android Forensics

NIST Cyber Security Framework

Subject: Application for Cybersecurity Role

Dear Hiring Manager,

I am writing to express my strong interest in a cybersecurity position at your organization. With over two years of hands-on experience in vulnerability research, bug bounty programs, and static code analysis, I bring a practical and results-driven approach to security that blends offensive knowledge with strong communication and teamwork.

- Until recently, I worked as a Security Researcher at **Loginsoft**, where I conducted in-depth vulnerability analysis across open-source ecosystems. My focus was on identifying vulnerable code paths associated with CVEs — contributions that directly aided clients in detecting vulnerable libraries, like tools like **CheckMarx SCA** and **Snyk**.
- Alongside this, I actively participated in bug bounty and VDP programs, responsibly disclosing critical vulnerabilities, including 7 SQLi, 1 RCE, and multiple information disclosure bugs, some of which were acknowledged by Indian government portals.
- I've also completed threat detection and incident response challenges on platforms like **TryHackMe**, where I gained beginner-level exposure to Elastic Stack and threat-hunting scenarios.
- Previously, I worked at Wipro, where I mentored a team of 18, developed structured documentation processes, and honed my ability to work under pressure—qualities that I believe are essential.
- With a deep understanding of web vulnerabilities (especially OWASP Top 10), solid communication skills, and a team-first mindset, I'm ready to contribute meaningfully to Siemens.

My leadership foundation was built at **Wipro Digital Operations**, where I served as a **Senior Associate**. There, I:

- Mentored a team of 18, driving performance improvements through hands-on coaching and training.
- Achieved a 95%+ issue resolution rate, while reducing repeat incidents by 30%.
- Was consistently ranked among the Top 3 performers across the entire project.
- I'm confident in managing shift-based teams, maintaining operational SLAs, and creating a positive, accountable team culture.

Security Research Projects (Top 3 Works)

ReconFavicon – A popular OSINT tool used for identifying targets via favicon hashes:

While I do not hold a formal degree, I've invested over 2 years in real-world security work — from bug bounty triaging to static code analysis across PHP, Ruby, Python, Java, Go, .NET, and C/C++ stacks. My strong documentation skills and ability to break down technical findings for non-technical stakeholders make me well-suited for your organization mandate of translating risk into actionable insight for senior management. I'm particularly drawn to your organization global mindset, focus on continuous learning, and emphasis on social impact. I'm also open to training in unfamiliar technologies (SIEM, SOAR, cloud platforms), and I thrive in dynamic, collaborative environments, and I am open to international travel and bring both humility and hunger to grow alongside world-class professionals.

- Thank you for considering my application. I would be honored to bring my energy, skills, and curiosity to your respective team, and I look forward to the opportunity to contribute to your mission of securing the digital future.

Warm Regards,
Suman Roy
